

Screw pumps

Series SNHBA, SNHBAR, SNHBAN, SNFBA, SNFBAR, SNFBAN

SNFBA

SNHBAR

Use

For handling hydraulic oils on the basis of mineral oils, or of synthetic hydraulic liquids as well as other lubricating fluids. The fluids to be pumped must not contain any abrasive substances nor chemically attack the pump materials.

Temperature and pressure limits

admissible temperature of fluid to be pumped 100°C ①

admissible suction lift

see NPSH values, page 2

admissible supply pressure 7 bar ②

admissible pump outlet pressure ③ 70/100 bar

whereby the admissible load of the pump casing (delivery casing) is a function of the material:

Pump size	Pump casing material	adm. outlet press. (bar)
40, 80, 120	c.i. (GG-25)	100
210	c.i. (GG-25) s.g.c.i. (GGG-40)	80 100
280	c.i. (GG-25) s.g.c.i. (GGG-40)	70 100

① with higher temperatures inquiry at our works necessary.

② with higher supply pressures inquiry at our works necessary.

③ for the attainable delivery pressure related to a viscosity of 40 mm²/s please refer to the performance tables.

For delivery pressures up to 120 bar, please refer to series SMFBA (pamphlet VM 664 E/...)

Design

Self-priming three-screw pump with internal bearing.

The hardened and ground spindles run in a replaceable casing insert.

The axial thrust acting on the flanks of the screw threads is compensated by balance pistons which – with all three spindles – are arranged in the delivery chamber.

The idler spindles are turned hydraulically. The thread flanks merely transmit the torque resulting from the liquid friction and are consequently practically free of stress and not subject to any wear.

A groove ball bearing lubricated by the fluid to be pumped serves for fixing the driving spindle.

A maintenance-free unbalanced mechanical seal is used as shaft sealing. By means of a return pipe, the sealing chamber is connected with the suction chamber. Therefore, irrespectively of the delivery pressure, only the suction/inlet pressure always becomes effective at the shaft sealing.

Kinematic viscosity/Performance data

As a rule, hydraulic oils/hydraulic liquids are in the viscosity range between 20 mm²/s (3E) and 75 mm²/s (10E). For the performance tables, page 4 and 5, 40 mm² (5E) with the speeds of 1450, 1750, 2900 and 3500 1/min were taken as a basis. With different viscosities, the performance data are to be taken from the individual characteristics.

Function

Owing to a special profiling of the flanks of the screw threads, the three spindles form sealed chambers, the contents of which are axially and completely continuously shifted from the suction to the delivery side of the pump. There is no turbulence despite the rotational movement, and squeezing stresses are avoided by the constant volume in the chambers.

Speed of rotation

Based on the small dimensions of the rotating screw spindles and according to pump size and design rotational speeds up to 11000 1/min are possible. With very high speeds respectively for determining the speed limit the suction/inlet pressure conditions, the design of the shaft sealing and of the bearing as well as the running speed of the thread flanks have to be considered.

The performance tables were established for the normal speeds of 1450, 1750, 2900 and 3500 1/min. The pumps being used for other speed ranges, please inquire.

Noise/pulsation

The structural design and mode of operation of the screw pump ensure a very low noise level and a nearly pulsation-free delivery.

Shaft sealing

By an uncooled, maintenance-free mechanical seal of the unbalanced type.

Materials

Rotary seal ring: Hard carbon, metal-impregnated

Stationary seal ring: Alloyed cast iron

Auxiliary sealings: Viton

Spring: CrNiMo steel

Metal parts: CrNiMo steel

An incorporated control valve serves for a slight excess pressure within the area of the shaft sealing. As a result hereof, during suction operation, air intake through the shaft sealing is avoided and dry operation of the mechanical seal prevented.

Bearing

In an internal groove ball bearing lubricated by the fluid to be pumped.

Connections/Branch position

The suction and delivery connections for both pump series are to be optionally provided with a SAE flange connection, a threaded pipe connection or with a NPT pipe connection.

Suction and delivery branch:

normally radially upwards.

Suction and delivery casings being separate, the suction casing and thus the suction branch can also be arranged, according to the hole spacing, turned through 90°.

Installation

The pumps can be mounted in any position. For safety purposes, the arrangement with "motor downwards" is not admissible.

Materials

Part Denomination No.	Material design ①		
	W1	W2	W3
1 Pump casing	c.i.(GG)	c.i.(GG)	s.g.c.i.(GGG)
2 Casing insert	c.i.(GG)	silafont	silafont
3 Pump cover, drive side	c.i.(GG)	c.i.(GG)	c.i.(GG)
4 Suction casing	c.i.(GG)	c.i.(GG)	c.i.(GG)

8 Balance bush	silafont	silafont	silafont
12 Driving spindle	nitride steel	nitride steel	nitride steel
13 Idler spindle	nitride steel	nitride steel	nitride steel

With synthetic hydraulic fluids, other material combinations are to be provided (inquiry at our works necessary).

① For the required material combination as a function of viscosity, speed and delivery pressure, please refer to the performance tables, page 4 and 5.

Shaft coupling and protection against accidental contact

Shaft coupling according to DIN 740

A protection according to DIN 31 001 against accidental contact also is supplied as soon as the scope of supply includes pump, base plate and shaft coupling or when a bracket with feet is included in the delivery volume.

Drive

The pumps will be coupled either directly (Series SNHBA) or by means of a bracket with feet for floor or wall mounting (Series SNFBA) with electric motors of the most varied kinds or with other driving engines.

In most cases, surface cooled, three phase A.C. short circuit motors, construction B3 and IMB5 or V1 are provided; enclosure IP54 according to IEC Standards, class B insulation, motor windings for 400 V Δ , 50 or 60 Hz.

Pressure relief valves

The pumps have no pressure relief valves. Therefore, the overload protection is to be provided in the control system or as a pipeline valve.

120-42	3,0	3,0	3,0	3,6
120-46	3,0	3,0	3,4	4,5
210-40	3,0	3,0	3,2	4,2
210-46	3,0	3,0	4,5	6,0
280-43	3,0	3,0	4,3	5,8
280-46	3,0	3,0	5,3	7,5

The values as indicated apply to airless fluids to be pumped (a safety allowances of 0.5 m is already included). In case of fluids to be pumped with air pockets (unsolved air), either the pump must be adapted or allowances on the stated NPSH values are necessary. For these purposes, by all means inquire at our works.

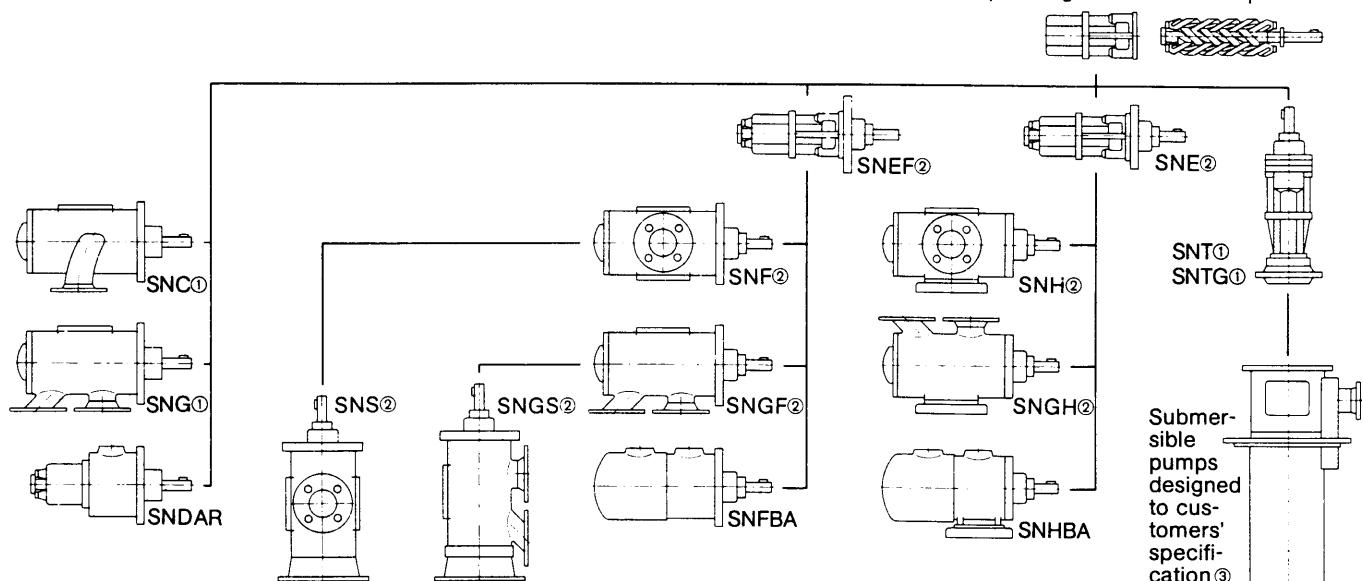

Unit-assembly principle

Three-screw pumps, SN series.

Same delivery elements with different types of casing construction.

Pump casing insert + Screw spindle set

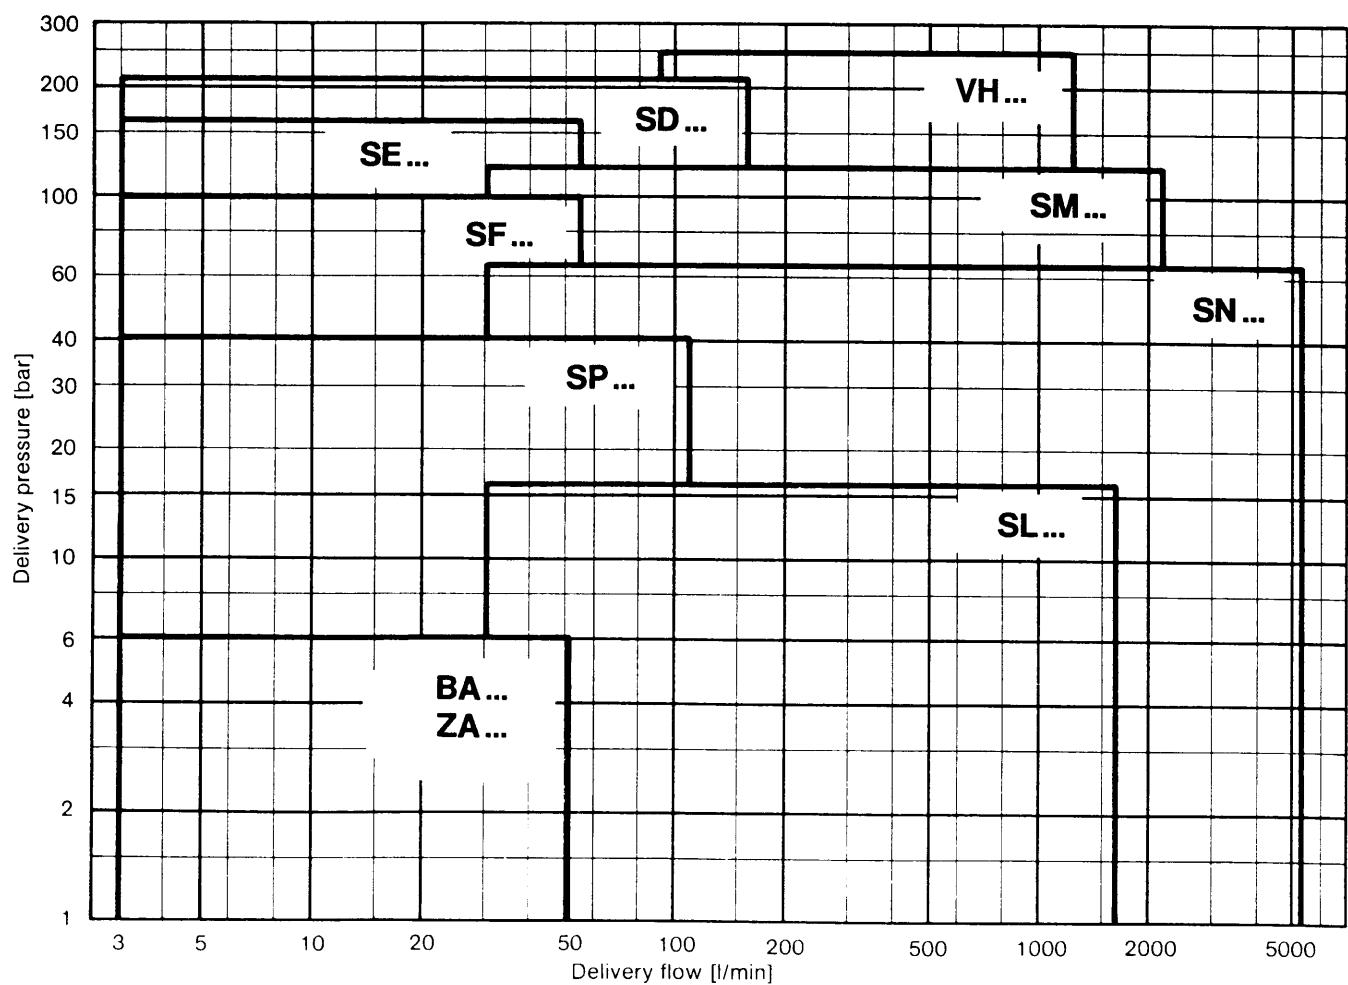

① For series SNC, SNG, SNT and SNTG pump dimensions and sectional drawings are available upon request.

② For series SNH, SNGH, SNF, SNGF, SNS, SNGS, SNE and SNEF please refer to pamphlet VM 617 GB/...

③ For submersible pumps designed to customers' specification dimension drawings will be prepared per order.

Performance survey

For nominal pump outputs not covered by the series SNHBA and SNFBA further pump series of single entry three-screw pumps are available according to the following survey (stated performances refer to 50-Hz speeds).

Observe admissible load of casing insert and pump casing (delivery casing) as a function of the material.

Casing insert

Material (cast iron [GG-25] or silafont) according to pressure limitation.

 Δp = delivery pressure
[bar] (Differential pressure between suction and delivery branch)

Q = effective delivery flow [l/min]

P = power consumption at pump shaft [kW]

Performance data for other viscosity ranges to be taken from the individual characteristics.

Performance tablesData for kinematic viscosity $\nu = 40 \text{ mm}^2/\text{s}$ (5E) and 2900 1/min

Observe admissible load of casing insert and pump casing (delivery casing) as a function of the material.

Casing insert

Material (cast iron [GG-25] or silafont) according to pressure limitation.

Pump casing (delivery casing)

Pump sizes 40, 80, 120 pump casing of c.i. (GG-25) up to 100 bar pump outlet pressure

Pump size 210 pump casing of c.i. (GG-25) up to 80 bar outlet pressure, above s.g.c.i. (GGG-40)

Pump size 280 pump casing of c.i. (GG-25) up to 70 bar outlet pressure, above s.g.c.i. (GGG-40)

Performance data for other viscosity ranges to be taken from the individual characteristics.

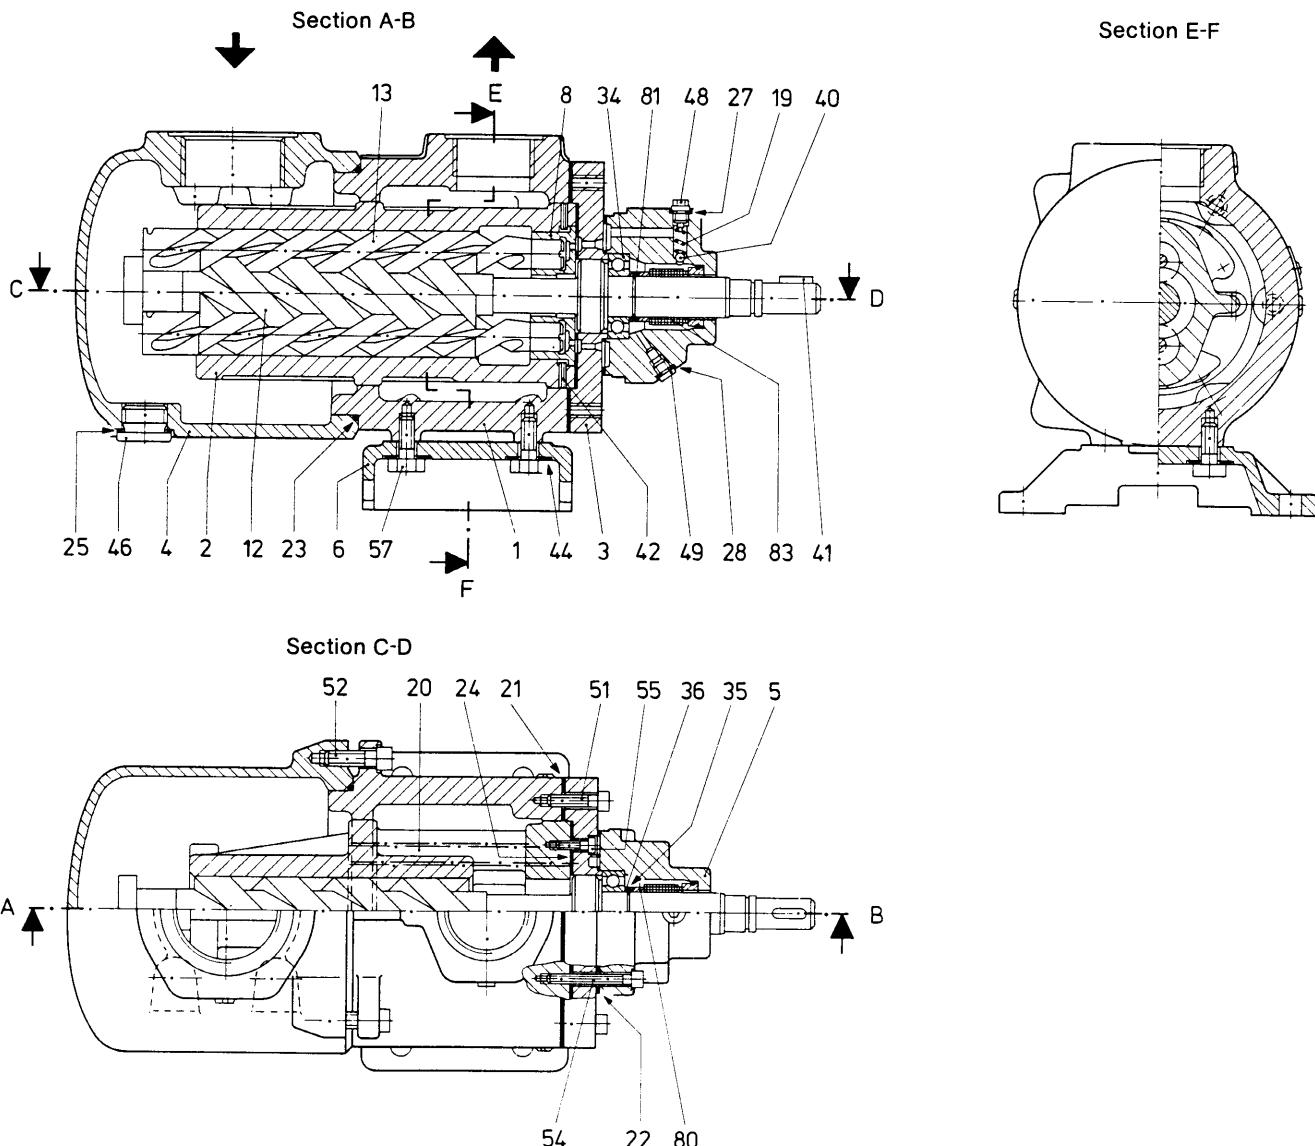

Δp = delivery pressure
[bar] (Differential pressure between suction and delivery branch)

Q = effective delivery flow [l/min]

P = power consumption at pump shaft [kW]
